Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/643,126	Applicant(s) HUMPERT ET AL.	
	Examiner Michael P. Ferguson	Art Unit 3679	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 January 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 51, 52 and 54 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 51, 52 and 54 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 12 January 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☒ Certified copies of the priority documents have been received in Application No. 09/418,875.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 18, 2006 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 51,52 and 54 are rejected under 35 U.S.C. 102(b) as being anticipated by Tinnerman (US 2,342,170).

As to claim 54, Tinnerman discloses a functional element **10,40** in the form of a pin having first and second ends and a length and a diameter and a thread **13,43** formed at the first end and extending along at least a part of the length, the pin diameter being substantially constant along the length, the pin further having features **15,45** interrupting the thread at the first end, the first end being adapted for attachment to a sheet metal part **A,B** having a cylindrical recess (defined by a cylindrical shaped opening between tongues **24,25**) of the sheet metal part with a continuous base

(defined by tongues **24,25** formed from continuous pieces of metal) receiving the first end, material of the sheet metal part **being capable of** being deformed radially inwardly of the thread at the first end and engaging the features, whereby the threaded pin is permanently attachable to the sheet metal part (pin **10,40** is capable of being permanently attached to sheet metal part **A,B**, if one chooses not to remove the pin) and projects beyond the sheet metal part for the attachment of another component thereto (Figures 3 and 7).

As to claim 51, Tinnerman discloses a functional element **10** wherein the features define a groove **15** disposed crosswise through the thread **13** thereby providing anti-rotational properties to the thread (Figure 3).

As to claim 52, Tinnerman discloses a functional element **40** wherein the features define a rib **45** disposed crosswise through the thread **43** thereby providing anti-rotational properties to the thread (Figure 7).

4. Claims 51,52 and 54 are rejected under 35 U.S.C. 102(b) as being anticipated by Shirai (US 4,818,165).

As to claim 54, Shirai discloses a functional element **20** in the form of a pin having first and second ends and a length and a diameter and a thread **27** formed at the first end and extending along at least a part of the length, the pin diameter being substantially constant along the length, the pin further having features **A,B** (Figure 4 reprinted below with annotations) interrupting the thread at the first end, the first end **being capable of** attachment to a sheet metal part having a cylindrical recess of the sheet metal part with a continuous base receiving the first end, material of the sheet

Art Unit: 3679

metal part being deformed radially inwardly of the thread at the first end and engaging the features, whereby the threaded pin is **capable of being** permanently attached to the sheet metal part and projects beyond the sheet metal part for the attachment of another component thereto (Figure 1).

As to claim 51, Shirai discloses a functional element **20** wherein the features define a groove **A** disposed crosswise through the thread **27** thereby providing anti-rotational properties to the thread (Figure 1).

As to claim 52, Shirai discloses a functional element **20** wherein the features define a rib **B** disposed crosswise through the thread **27** thereby providing anti-rotational properties to the thread (Figure 1).

Response to Arguments

5. Applicant's arguments filed January 18, 2006 have been fully considered but they are not persuasive.

As to claim 54, Attorney argues that:

Tinnerman does not disclose a functional element wherein the first end is adapted for attachment to a sheet metal part having *a cylindrical recess of the sheet metal part with a continuous base* receiving the first end.

Examiner disagrees. As to claim 54, Tinnerman discloses a functional element **10,40** wherein the first end is adapted for attachment to a sheet metal part **A,B** having a cylindrical recess (defined by a cylindrical shaped opening between tongues **24,25**) of the sheet metal part with a continuous base (defined by tongues **24,25** formed from continuous pieces of metal) receiving the first end (Figures 3 and 7).

As to claim 54, Attorney argues that:

Shirai does not disclose a functional element *wherein the first end is adapted for attachment to a sheet metal part having a cylindrical recess of the sheet metal part with a continuous base* receiving the first end.

Examiner disagrees. As to claim 54, Shirai discloses a functional element **20** wherein the first end **is capable of** attachment to a sheet metal part having a cylindrical recess of the sheet metal part with a continuous base receiving the first end (Figure 1).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael P. Ferguson whose telephone number is (571)272-7081. The examiner can normally be reached on M-F (8:00-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel P. Stodola can be reached on (571)272-7087. The fax phone

Art Unit: 3679

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
